

## 1. Mounting Options

To assemble the unit Free-Standing or Wall-Mount, please see [install video](#).

## 2. Powering on your device

- Plug in the power cable to outlet.
- Turn **On** the switch on top left of the device. The screen will take approx 30 seconds to boot up.

## 3. Connecting your device to LAN cable (Recommended)

Simply plug in your CAT internet network cable to the provided device RJ45 cable. Your screen location needs to be in proximity of your own network cable.

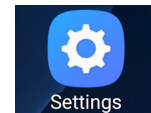

LAN Wire

## 4. Connecting your device Wirelessly

Using the Touch-Screen, follow the below steps.

- From the **Home Screen**, Tap the **Arrow** at the very bottom to display the **Apps Menu**. Press the “**Settings**” Icon to open **Settings**.
- Then Press the “**WiFi**” Icon, make sure it's enabled (toggle button is on) and select your **WiFi Network** from the list.
- A window will pop-up asking for a network password. Enter the password and press **Connect**.
- Below your WiFi Network name, it should now say **Connected**.

## 5. Additional Notes

- Repeat this process for each screen.
- If you are signed up for Airborne Visuals Content Management Software Subscription, you should now be able to install and setup the Cloud Based CMS and request activation.
- Soon you should be able to publish and see your content.
